Practical Bacteriology

Basic Practical Microbiology – A
 Manual ©2006 SGM 7 Sterilisation using
 the autoclave/pressure cooker The

principle of sterilisation in an autoclave
 or pressure cooker is that steam under
 pressure is used to produce a
 temperature of 121 °C which if held for
 15 minutes will kill all micro-organisms,
 including bacterial endospores.

INTRODUCTION TO BACTERIOLOGY 1. Two main threads in the history of bacteriology: 1) the natural history of bacteria and 2) the contagious nature of infectious diseases, were united in the latter half of the 19th century. During that period many of the bacteria that cause human disease were identified and characterized. 2. Individual bacteria were first observed microscopically by Antony van ...
