The Chemistry Of

Heterocycles

Structures

A good book if you are looking for knowledge about heterocycles (properties, preparation, reactivity) organized with an encyclopedic type style. Heterocycles of ring sizes 3-6 with N, O, or S, are thoroughly reviewed. A few fused ring systems are included as well, but I was disappointed to find that the book was lacking in this area.

The chemical reactivity of the saturated members of this class of heterocycles: tetrahydropyran, thiane and piperidine, resemble that of acyclic ethers, sulfides, and 2°-amines, and will not be described here. 1,3-Dioxanes and dithianes are cyclic acetals and thioacetals. These units are commonly used as protective groups for aldehydes

and ketones, as well as synthetic intermediates, and may be hydrolyzed by the action of aqueous acid.

Heterocyclic Chemistry

Heterocycles - cyclic structures in which the ring atoms may include oxygen or nitrogen - can also be aromatic. Pyridine, for example, is an aromatic heterocycle. In the bonding picture for pyridine, the nitrogen is sp^2 -hybridized, with two of the three sp^2 orbitals forming sigma overlaps with the sp^2 orbitals of neighboring carbon atoms, and the third nitrogen sp^2 orbital containing the lone pair.

make predictions about the chemical behaviour of the fused-ring heterocycle based on what you have learned about pyrrole, imidazole, pyridine and pyrimidine. Heterocyclic structures are found in many natural products. Examples of some nitrogen compounds, known as alkaloids because of their basic properties, were given in the amine chapter.
