Piping systems in a chemical plant (refineries, petrochemical plant, fertilizer plant, gas plant etc.) are comparable to the arteries and veins through which fluid, vapors, slurries, solids etc. flow under various conditions as imposed by the process design of the plant. Piping network is subjected to almost all the severest conditions of the plant such as

high temperature, pressure, flow and combination of these.

Overview to Piping Engineering - The Process Piping

The base rules for piping engineering are the ASME B31 Codes (herein referred to as the Codes). Each Code provides the typical loading conditions to be considered; allowable stresses; minimum wall thickness calculations; and minimum fabrication, inspection and testing requirements. Other major codes are listed that may apply in certain situations.

Introduction to Piping Engineering
