How to model soil layer in ABAQUS? - ResearchGate Set this parameter equal to the maximum allowable ratio of the stabilization energy to the total strain energy. The initial damping factor is specified via the STABILIZE parameter or the FACTOR parameter. This damping factor will then be adjusted through the step based on the convergence history and the value of ALLSDTOL. If this parameter is set equal to zero, the adaptive automatic damping algorithm is not activated; a constant damping factor will be used throughout the step.

The first approach is a sequential one, in which the permafrost melting process is modeled as a pure heat transfer analysis in Abaqus, and the resulting temperature is used to drive a soils consolidation analysis. The second approach is fully coupled, in which the heat transfer and soils consolidation problems are solved in a fully coupled manner in a single analysis.
