Wikipedia has the nice section on optimal Mastermind strategies: In 1977, Donald Knuth demonstrated that the codebreaker can solve the pattern in five moves or fewer, using an algorithm that progressively reduced the number of possible patterns. The algorithm works as follows: Create the set S of 1296 possible codes, 1111,1112,..., 6666.

Beyond complete search, genetic algorithms (GAs) have been applied extensively to mastermind, including [6], [7] and [10]. In the GA paradigm, a large set of "eligible" codes (e.g. consistent codes – although several approaches show that inconsistent codes are sometimes more informative for mastermind search) is considered for each generation.

Novel Algorithms for Deductive Games - CORE

The past decades have witnessed a growing interest in research on deductive games such as Mastermind and AB game. Because of the complicated behavior of deductive games, tree-search approaches are often adopted to find their optimal strategies. In this paper, a generalized version of deductive games, called 3×n AB games, is introduced.
