Unit 6 Subjects INTRODUCTION TO VOLUMETRIC ANALYSIS

Volumetric Analysis : Definition and Principle
 In practical chemistry, based on chemical analysis the nature and amount of a substance ion can be determined. This chemical analysis is of two types' quantitative analysis and qualitative analysis. Quantitative analysis deals with the volumetric and massive analysis of elements of a substance.

Volumetric Analysis : Definition and Principle

Unit 3 Chemistry -

Volumetric Analysis

Volumetric analysis is a quantitative chemical analysis used to determine the unknown concentration of one reactant [the analyte] by measuring the volume of another reactant of known concentration [the titrant] needed to completely react with the first. The volumetric analysis is also known as a titration.

Unit 3 Chemistry - Volumetric Analysis

Volumetric analysis is a quantitative analytical method which is used widely. As the name suggests, this method involves measurement of the volume of a solution whose concentration is known and applied to determine the concentration of the

analyte. In other words, measuring the volume of a second substance that combines with the first in known proportions is known as Volumetric analysis or titration.

Volumetric Analysis - Procedures and Basic Principles of ...

Volumetric analysis is a practical approach towards accurate measurement of concentration, molecular mass, purity percentage, formula of compounds, percentage composition of an element and stoichiometry of a chemical equation. It involves 3 important techniques. The first one is the use of apparatus like burette, pipette and volumetric flasks.

Techniques of Volumetric Analysis | A-Level Chemistry

...

Volumetric analysis, any method of quantitative chemical analysis in which the amount of a substance is determined by measuring the volume that it occupies or, in broader usage, the volume of a second substance that combines with the first in known proportions, more correctly called titrimetric analysis (see titration).

volumetric analysis | Definition, Uses, & Facts | Britannica

Volumetric analysis is a widely-used quantitative analytical method. As the name implies, this method involves the measurement of volume of a solution of

known concentration which is used to determine the concentration of the analyte. Prepare a solution from an accurately weighed sample to ± 0.0001 g of the material to be analyzed.

Molarity of NaOH solution = (mass of KHP/molar mass of KHP) / Volume of NaOH
 a. Molarity = $(0.2816 \text{ g} / 204.22 \text{ g}) / 29.68 \text{ mL}$
 Molarity = $4.64 \times 10^{-5} \text{ M}$; Molarity of acetic acid = (Molarity NaOH * Volume NaOH) / Volume Acetic Acid
 b. Molarity = $((4.64 \times 10^{-5} \text{ M}) * 20.22 \text{ mL}) / 10.06 \text{ mL}$
 Molarity = $9.34 \times 10^{-5} \text{ M}$ Post Lab 1.

The analytical method wherein the concentration of a substance in a solution is estimated by adding exactly the same number of equivalents of another substance present in a solution of known concentration is called volumetric analysis. This is the basic principle of titration. Another name for volumetric analysis is titrimetric analysis.
