Edaphology is concerned with the influence of soils on living things, particularly plants. It is one of two main divisions of soil science, the other being pedology. Edaphology includes the study of how soil influences humankind's use of land for plant growth as well as people's overall use of the land. General subfields within edaphology are agricultural soil science and environmental soil science. In Russia, edaphology is considered equivalent to pedology, but is recognized to have an applied
