M base = concentration of the base. V base = volume of the base. This equation works for acid/base reactions where the mole ratio between acid and base is 1:1. If the ratio were different, as in Ca (OH) 2 and HCl, the ratio would be 1 mole acid to 2 moles base. The equation would now be:

Acids and Bases: Titration Example Problem

An acid-base titrationis a neutralization reaction that is performed in the lab in order to determine an unknown concentration (Molarity) of acid or base. As long as the concentration of one of the solutions is known, the concentration of the other reaction can be obtained through titration.
