Speed and velocity questions (practice) | Khan Academy

The general formula for average acceleration can be expressed as: $\text{acceleration} = (\text{v Final} - \text{v Initial}) / (\text{t Final} - \text{t Initial})$ Where v stands for velocity and t stands for time. In algebraic notation, the formula can be expressed as: $a = \Delta v / \Delta t$; Acceleration can be defined as the rate of change of velocity with respect to time. Acceleration is one of the most basic concepts in modern physics, underpinning essentially every physical theory related to the motion of objects.
