Plant breeding is defined as identifying and selecting desirable traits in plants and combining these into one individual plant. Since 1900, Mendel's laws of genetics provided the scientific basis for plant breeding. As all traits of a plant are controlled by genes located on chromosomes, conventional plant breeding can be considered as the

manipulation of the combination of chromosomes.

BATS: Methods of Plant Breeding

The breeding strategy involves (1) production of a large number of triticales strains using different combinations (varieties as well as species) of wheat and rye, (2) hybridization of these triticales strains among themselves, and (3) improvement of the defects of the triticales through selection.

Plant breeding is the science of changing the traits of plants in order to produce desired characteristics. It has been used to improve the quality of nutrition in products for humans and animals. The goals of plant breeding are to produce crop varieties that boast unique and superior traits for a variety of agricultural applications. The most frequently addressed traits are those related to biotic and abiotic stress tolerance, grain or biomass yield, end-use quality characteristics such as tast

Plant breeding - Wikipedia

by Yves Madre and Valeria D Agostino
New Plant-Breeding Techniques (NBTs) are methods allowing the development of new plant varieties with desired traits, by modifying the DNA of the seeds and plant cells. They are called 'new' because these techniques have only been developed in the last decade and have evolved rapidly in recent years.

New Plant-Breeding Techniques: What are we talking about ...

The earliest method of plant breeding based on an elementary knowledge of the laws of inheritance has been the selection of plants within landraces, based on the assumption that the progenies of the best individuals are expected to be superior to the progeny of a random sample of the population.
