The graph indicates that the levels of nitrate in the eco-column increases over the period of the lab. Justification: If you refer to the slope of the best fit line on the graph for the nitrate levels in the eco-column, the slope is 0.08. This is a positive slope which means that there is an increase in the nitrate in the eco-column. Explanation

Eco-Column Lab - Enviornmental Science

The Aquatic Zone consisted of three guppies, a type of water plant called elodeaa, and water. The guppies urinate, creating NH3, which with the help of bacteria will become NO3, and the NO3 will be used by the plants as food. Along with the nitrogen cycle, the guppies help in the the carbon cycle by breathing and excreating, which is absorbed by the elodeaa to produce glucose.
