Inorganic Scintillators for Detector Systems: Physical ...

The most common inorganic scintillator is sodium iodide activated with a trace

amount of thallium [NaI (Tl)], which has an unusually large light yield corresponding to a scintillation efficiency of about 13 percent.

Radiation measurement - Inorganic scintillators | Britannica

Inorganic scintillators are usually crystals grown in high temperature furnaces, for example, alkali metal halides, often with a small amount of activator impurity. The most widely used is Na I (Tl) (thallium -doped sodium iodide); its scintillation light is blue.
