Tilapia Production Using Biofloc Technology

Tilapia and bioflocs Tilapia are ideally adapted to biofloc systems. The filter-feeding herbivores adapt to the harvest of bioflocs suspended in the water, and the strong, stable fish grow and flourish in dense systems. An essential feature of biofloc tilapia production systems, especially as compared to shrimp systems, is the very high biomass.

Based on current knowledge, we hypothesized that Nile tilapia can be cultured in biofloc using up to 100 percent reuse water derived from other BFT systems, because previous studies have shown that

the species tolerates adverse environmental conditions and is considered to be one of the most physiologically adaptable species to biofloc culture, which allows cultivation at high densities.

The culture of tilapia in bioflocs proved to be an environmentally sustainable activity, since it was possible to use a volume of water that was 11.8 times less than compared to the system in clear water; Values for productivity greater than 9.7 kg O. niloticus m-3 and for survival of over 90% can be achieved using a biofloc system;

Culture of Nile tilapia in a biofloc system with different ...

Because of its low dwelling habit and resistance to environmental changes, biofloc technology is widely used in shrimp farming. Studies were conducted to assess shrimp and Nile tilapia larval growth and reproductive efficiency. In the biofloc system, increased breeding efficiency was observed in shrimps compared to standard crop practices.
