The Transcription and Translation Process - Practice Test ...

The process by which DNA is copied to RNA is called transcription, and that by which RNA is used to produce proteins is called translation.

Transcription, Translation and Replication

The production of proteins is completed through two processes: transcription and translation. Transcription and translation take the information in DNA and use it to produce proteins. Transcription uses a strand of DNA as a template to build a molecule called RNA. The RNA molecule is the link between DNA and the production of proteins.
