Distributed computing is a field of computer science that studies distributed systems. A distributed system is a system whose components are located

on different networked computers, which communicate and coordinate their actions by passing messages to one another. The components interact with one another in order to achieve a common goal. Three significant characteristics of distributed systems are: concurrency of components, lack of a global clock, and independent failure of components. Exampl

Parallel, Distributed, and Network-Based Processing has undergone impressive change over recent years. New architectures and applications have rapidly become the central focus of the discipline. These changes are often a result of cross-fertilisation of parallel and distributed technologies with other rapidly evolving technologies.

Grid computing projects. While distributed computing functions by dividing a complex problem among diverse and independent computer systems and then combine the result, grid computing works by utilizing a network of large pools of high-powered computing resources. These are typically "umbrella" projects that have a number of sub-projects underneath them, with multiple research areas.

The Distributed Computing and Networking R&D Group at INSOFE, led by Prof. Ashwin Ganesan, conducts research in all areas of networking, including interconnection networks, sensor networks, wireless networks, mobile computing, and IoT. The group also investigates research questions in data science. The group’s research focus is on the theoretical foundations of distributed systems and networks, and in particular on the communication-computation tradeoff mentioned above.
