Vibration Control of Active Structures (Solid Mechanics ...

Active vibration control is defined as a technique in which the vibration of a structure is reduced or controlled by applying counter force to the structure that is appropriately out of phase but equal in amplitude to the original vibration. As a result two opposite force cancel each other and structure stops vibrating.

Vibration Control of Active Structures: An Introduction ...

The main field of application for active control of vibrations is narrowband or harmonic disturbance forces exciting the host structure. To compensate those, a reference signal with the same frequency is generated and filtered in order to match the phase angle and amplitude for an optimal suppression of the disturbance. 2.4.
