Volume With Fractional Side Lengths
So let's calculate it. The volume here is going to be-- what's our length? Our length is 1 and 1/6 units. Now, when I multiply fractions as I'm about to do, I don't like to multiply mixed numbers. I like to write them as improper fractions, so let me convert 1 and 1/6 to an improper fraction. So 1 is the same thing as 6/6. Plus 1 is 7/6.

Lesson 11: Volume with Fractional Edge Lengths and Unit Cubes
Since the prism is built using (24) of these cubes, its volume, in cubic inches, would then be $(24 \cdot \frac{1}{8})$, or (3) cubic inches. The volume of the prism, in cubic inches, can also be found by multiplying the fractional edge lengths in inches: $(\frac{1}{2} \cdot \frac{3}{2} \cdot 4 = 3)$

Or another way to think about it is it's going to be 1/4 times 1/4 times 1/4 cubic feet, which is often written as feet to the third power, cubic feet. So 1/4 times 1/4 is 1/16, times 1/4 is 1/64. So this is going to be 1 over 64 cubic feet, or 1/64 of a cubic foot. That's the volume of each of these. **Volume with fractional cubes (video) | Khan Academy**
In the first example, the students will need to see that they have to break their units into halves. The side length 3 ½ will need 7 half units. The next side length of 2 will need 4 half units and the third side length of 2 will also need 4 half units. The students can multiply 7/2 x 4/2 to get 28/4 then multiply again by 4/2 to get 112/8.

The only variable one needs to know to compute the volume of any cube is the length of one of its sides. Since all sides are equal, it does not matter which side is given exactly. For example, if the length of a side is 5 inches, using the volume equation results in $5^3 = 5 \times 5 \times 5 = 125$ in ³ (cubic inches). Cite this calculator & page
