Dynamic mode decomposition (DMD) is a dimension-ality reduction technique introduced by Schmid in the fluid dynamics community to decompose high-dimensional fluid data into dominant spatiotemporal coherent structures [61, 60, 20, 70, 43, 13, 1].

Dynamic mode decomposition for compressive system ...

Dynamic mode decomposition is a method of modal extraction from full-state snapshot data that results in spatial-temporal coherent structures oscillating with a fixed frequency and damping rate. This theory has recently been generalized and extended to a larger class of datasets, and it is discussed in Sec. 2.1.

Abstract To understand the flow dynamic characteristics of a centrifugal compressor, the dynamic mode decomposition (DMD) method is introduced to decompose the complex three-dimensional flow field. Three operating conditions, peak efficiency (OP1), peak pressure ratio (OP2), and small mass flow rate (near stall, OP3) conditions, are analyzed.
