...

Understanding respiratory physiology can aid the practitioner in diagnosing the cause of respiratory symptoms. The main goals of respiration are oxygen uptake and elimination of carbon dioxide. Secondary goals include acid-base buffering, hormonal regulation, and host defense.

### **Respiratory Physiology - an overview | ScienceDirect Topics**

Respiratory physiology is a subcategory of human physiology that studies the respiratory system of the human body as well as breathing patterns, oxygen distribution and control within the body. The respiratory system. The main area of study within respiratory physiology is respiration.

### **What is Respiratory Physiology? (with pictures)**

In physiology, respiration is the movement of oxygen from the outside environment to the cells within tissues, and the transport of carbon dioxide in the opposite direction. The physiological definition of respiration differs from the biochemical definition, which refers to a metabolic process by which an organism obtains

energy by oxidising nutrients and releasing waste products. Although physiologic respiration is necessary to sustain cellular respiration and thus life in animals, the processes

### **Respiration (physiology) - Wikipedia**

This is an outstanding introductory overview to core concepts in respiratory physiology. The book is short and very easy to read, with simple explanations and clear diagrams. It should be more than sufficient for medical students, however, if you want a more in-depth understanding then you will need to build on this with other sources.
