Welcome. The workshop aims at advances in research of nonlinear behaviors of differential equations, such as the dynamics and stability of nonlinear waves, as well as modeling of and applications to real life problems. The workshop will bring together specialist working in various aspects of PDEs, dynamical systems and their

Workshop on Nonlinear Differential Equations, Dynamical ...

Dynamical systems describe the evolution of a state variable in time in the form of ordinary differential equations or as discrete mappings. Dynamical systems theory studies the solutions of such equations and mappings and their dependence on initial conditions and parameters. Research in nonlinear dynamical systems in particular is interested in qualitative changes of the solution type as parameters are changed (bifurcations) and in chaotic behavior of

solutions.

Nonlinear Differential Equations and Dynamical Systems ...

As nonlinear dynamical equations are difficult to solve, nonlinear systems are commonly approximated by linear equations (linearization). This works well up to some accuracy and some range for the input values, but some interesting phenomena such as solitons, chaos, and singularities are hidden by linearization. It follows that some aspects of the dynamic behavior of a nonlinear system can appear to be counterintuitive, unpredictable or even chaotic.

Dynamical Systems & Nonlinear Partial Differential Equations

The differential equations determining the evolution function Φ_t are often ordinary differential equations; in this

case the phase space M is a finite dimensional manifold. Many of the concepts in dynamical systems can be extended to infinite-dimensional manifolds—those that are locally Banach spaces—in which case the differential equations are partial differential equations .
