Virtual Tree View. Any tree view like component's purpose is to display a hierarchical list of items. A most common one you use and see every day is the one used in Windows Explorer—to display folders (and more) on your file system. Delphi comes with the TTreeView control—located on the "Win32" section of the tool palette. Defined in the ComCtrls unit, the TTreeView does a decent task of allowing you to present any parent-child relation of any type of objects.

Virtual Tree View: Delphi 3rd Party Open Source Component
Virtual Treeview does not read the data it manages except its size, not even the captions of a node. Everything is retrieved from the application via events or descendants via overridden methods. Virtual Treeview has already proven its concept as well as its great usability in many commercial products and freeware projects.

Virtual Treeview is a very flexible control. It uses a "virtual node" paradigm to achieve impressive run-time performance. Basically, initialisation is divided into 2 stages: Fast pre-initialization and Formal (and possibly expensive) initialization. The virtual paradigm defers formal initialization until absolutely needed for display purposes.
