Abstract. The 1943 Munsell renotation includes a table that converts 2734 Munsell specifications into xyY coordinates, along with a graphical interpolation method and a graphical inversion

method, that converts xyY coordinates back into Munsell specifications. This article presents open-source computer code, running in Matlab or Octave, that both interpolates and inverts the Munsell renotation automatically.

An Open Source Inversion Algorithm This article presents open-source computer code, running in Matlab or Octave, that both interpolates and inverts the Munsell renotation automatically. The steps in both algorithms are described in detail. Like previous inversion algorithms, it relies on interpolations between entries in the 1943 table.
