Solutions are likely to have properties similar to those of their major component—usually the solvent. However, some solution properties differ significantly from those of the solvent. Here, we will focus on liquid solutions that have a solid solute, but many of the effects we will discuss in this section are applicable to all solutions.

Properties of Solutions - GitHub Pages

A solution is defined as a chemically and physically homogeneous mixture of two or more substances. Homogeneous is a term used to imply that a mixture is uniform; that is, all the parts are identical. When subjected to routine chemical and physical analysis, the parts test the same. A binary solution is a mixture of only two components.
