PROTECTION AND MONITORING OF THREE PHASE INDUCTION MOTORS

A three phase induction motor is a type of AC induction motors which operates on three phase supply as compared to the single phase induction motor where single phase supply is needed to operate it. The three phase supply current produces an electromagnetic field in the stator winding which leads to generate the torque in the rotor winding of three phase induction motor having magnetic field.

Induction Motor Protection System Project kit The system uses a 3-Phase power supply where 3-single phase transformers are linked to it. If any of the phases is not accessible the equivalent transformer ends supplying power to the circuit. This directs to one of the 4-relays getting switched OFF.

Induction Motor Protection System - Block Diagram and Its ...

In the case of a three-phase induction motor, the stator holds symmetrically distributed three-phase

winding in its slots. Whenever we connect the three-phase supply with the 3 phase stator winding, a rotating magnetic field appears in the space inside the stator. The speed of the rotating magnetic field depends on the supply frequency.

How does a 3 Phase Induction Motor work? - About Circuit

Thus from the working principle of three phase induction motor, it may be observed that the rotor speed should not reach the synchronous speed produced by the stator. If the speeds become equal, there would be no such relative speed, so no emf induced in the rotor, and no current would be flowing, and therefore no torque would be generated.

3 Phase Induction Motor Definition And Working Principle

Anyway let's come to the basic point of three phase induction motor – which will help us to understand clearly about motor thermal overload protection. As the rotating magnetic flux cuts each of the bar conductor of rotor, there will be an induced circulating current flowing through the bar conductors. At starting the rotor is stand still and stator field is rotating at synchronous speed, the relative motion between rotating field and rotor is maximum.

Javed A. and Izhar T. have proposed the protection of three phase induction motor based on voltage measurement and is not enough to protect the motor if the fault occurs at distribution transformer or at substation feeder. If fault occurs at motor terminals then the voltage measurement can protect the motor very well.

Phase sequence on the other hand is when two of the phases are interchanged resulting to a reverse rotation of a 3-phase motor. Phase loss is mandatory
