Solving Rational Inequalities. The key approach in solving rational inequalities relies on finding the critical values of the rational expression which divide the number line into distinct open intervals. The critical values are simply the zeros of both the numerator and the denominator. You must remember that the zeros of the denominator make the rational expression undefined, so they must be immediately disregarded or excluded as a possible solution.

When you multiply both sides of an equation by a negative number you have to swap the inequality. So this greater than sign will become a less than sign because we're assuming that the x plus 2 is negative. These cancel out. 0 times anything is 0. We get that x minus 1 is less than 0. Solving for x, adding 1 to both sides, x is less than 1.
