Abstract. Cystic fibrosis (CF) is an inherited disease characterized by the accumulation of thick, sticky mucus which damages epithelia in organs such as the lungs, pancreas, liver, intestines, and other parts of the body. The most common symptoms are sinopulmonary disease and chronic gastrointestinal tract problems resulting from decreased mucociliary clearance and inflammation.

Clinical Care Guidelines | CF Foundation

Probiotics significantly reduce faecal calprotectin (a marker of intestinal inflammation) in children and adults with CF, however the clinical implications of this require further investigation. Probiotics may make little or no difference to pulmonary exacerbation rates, however, further evidence is required before firm conclusions can be made.
