Nonlinear properties of dust acoustic waves are studied in Jupiter's

magnetosphere. The space plasma contains Maxwellian distributed electrons, ions, and positively charged dust grains with nonuniform size distribution interacting with streaming electrons and ions coming from the solar wind.

Envelope solitons and rogue waves in Jupiter's magnetosphere

The background cold electron density plays an important role in plasma and wave dynamics. Here, we investigate an event with clear modulation of the particle fluxes and wave intensities by background electron density irregularities based on Van Allen Probes observations. The energies at the peak fluxes of protons and Helium ions of 100 eV to several keV are well correlated

with the total electron density variation.

We have investigated the propagation and interaction of nonlinear electron acoustic waves (EAWs) in a plasma comprising hot (superthermal) and cold electrons and immobile ions. We have derived the Korteweg-de Vries equation for EAWs in the small amplitude limit.

I'm not seeing how no magnetic field is created in electrostatic waves. Thanks for any help. Jack

Electrostatic waves in a plasma | Physics Forums

Considering a system of positively charged different sizes of dust grains which interacts with streaming electrons and ions, modulational instability (MI) together with the formation of envelope solitons and rogue waves are studied in Jupiter's middle magnetosphere.

Envelope solitons and rogue waves in Jupiter's magnetosphere

Jupiter's magnetosphere (the region of space in which Jupiter's magnetic field influences the motion of charged particles) is the largest object in the

solar system; it exhibits new phenomena and behaves, in some respects, like a pulsar. It is a magnetosphere whose physics is dominated by internal sources of plasma and energy.

Physics of the Jovian magnetosphere in SearchWorks catalog

When satellites discovered the radiation belt and began exploring the magnetosphere, a fourth direction opened, space plasma physics. From fusion research, space scientists

borrowed the theory of plasma trapping by a magnetic field, and from ionospheric physics, the theory of plasma waves.

Plasma Physics -- History

Such low frequency small amplitude Alfvén waves are predicted to damp only over length scales too long to heat the corona. Recent observations, though, show that these waves are actually damped in the low corona. The plasma physics of the damping process has not been determined.
