Health Psychology — perspectives clinic

Generally speaking, stress means pressure or strain. Life constantly subjects us to pressures. In people, stress can be physical (e.g., disease), emotional (e.g., grief), or psychological (e.g., fear). Individuals vary in their ability to cope with stress. How you see a situation and your general physical health are the two major factors that determine how you will respond to a stressful event or to repeated stress.

Stress and Your Health | The Journal of Clinical ...

Health psychology is concerned with the psychology of a range of health-related behaviors, including healthy eating, the doctor-patient relationship, a patient's understanding of health information, and beliefs about illness. The biopsychosocial model views health and illness as the product of biological characteristics (genes), behavioral factors (lifestyle, stress, health beliefs), and social conditions (cultural influences, family

relationships, social support).
