Motion of charged particles in magnetic field. When a charged particle moves through a region of space where both electric and magnetic fields are

Abstract. One of the

most important applications of the electric and magnetic fields deals with the motion of charged particles. For instance, in experimental nuclear fusion reactors the study of the plasma requires the analysis of the motion, radiation, and interaction, among others, of the particles that forms the system.

Motion of Charged Particles in Electromagnetic Fields ...

The motion of charged particle depends on charge and mass. The positively charged particle moving parallel to electric field gains kinetic energy whereas the negatively charged particle loses. Thus, an electric field can be used to accelerate charged particles to

high energies. If you have queries please feel free to use comment box.
