Nanotechnology for Sustainable Energy : Subject Index

The use of nanotechnology to develop a suite of sustainable energy production schemes is one of the most important scientific challenges of the 21st century. The challenge is to design, to synthesize, and to characterize new functional nanomaterials with controllable sizes, shapes, and/or structures.

Preparation and Characterization of Nanomaterials for ...

For assistance in the design of the next generation of nanomaterials that are functional and have minimal health and safety concerns, it is imperative to establish causality, rather than correlations, in how properties of nanomaterials determine biological and environmental outcomes. Due to the vast design space available and the complexity of nano/bio interfaces, theoretical and computational ...

The Center for Sustainable Nanotechnology

Nanotechnology offers, for the first time, tools to develop new industries based on cost-effective and cost-efficient economies, thus seriously contributing to a sustainable economic growth.

Nanotechnology is a broad term typically used to describe materials and phenomena at nanoscale, i.e., on the scale of 1 billionth to several tens of billionths of a meter (see Fig. 1).

However, it specifically implies not only the miniaturization but also the precise manipulation of atoms and molecules ...

increasing global demands for food, water, and energy, there is a critical need in the U.S. to identify sustainable solutions for simultaneously achieving energy, water, and food security. Agriculture accounts for approximately 70 % of all freshwater use, and 10 % of energy consumption, globally. Therefore, the agroecosystem lies at the heart of the energy ...

The role of nanotechnology in sustainable textiles ...

The bottom line is that while non-renewable energy resources currently comprise 80 percent of the world's energy requirements, over time, that's simply not going to sustainable. If we hope to maintain life on our planet, emerging green energy technology must be used alongside existing methods to transition from the unsustainable to the sustainable.
