Salesforce Developer Network: Salesforce1 Developer Resources. Note. Triggers are stored with an isValid flag that is set to true as long as dependent metadata has not changed since the trigger was last compiled. If any changes are made to object names or fields that are used in the trigger, including superficial changes such as edits to an object or field description, the isValid flag is set ...

Defining Triggers | Apex Developer Guide | Salesforce ...

Learn about Salesforce Apex, the strongly typed, object-oriented, multitenant-aware programming language. Use Apex code to run flow and transaction control statements on the Salesforce platform. Apex syntax looks like Java and acts like database stored procedures. Developers can add business logic to most system events, including button clicks, related record updates, and Visualforce pages.

Trigger Exceptions | Apex Developer Guide | Salesforce ...

Triggers in Salesforce are programmatic event handlers which is an Apex code that gets executed when a record is saved. Trigger is an object where for each trigger we have written, Salesforce will create a record in ApexTrigger object. Apex Trigger is also a class which contains twelve static context variables.

Triggers in Salesforce | Apex Triggers - Apex Developer Guide

TriggerContext Methods. The following are methods for TriggerContext. currentContext () Returns an instance of the EventBus.TriggerContext class containing information about the currently executing trigger. getResumeCheckpoint () Returns the replay ID that was set by setResumeCheckpoint (). The returned value is the replay ID of the event message after which trigger processing resumes in a new trigger invocation.

TriggerContext Class | Apex Developer Guide | Salesforce ...

Just like database systems support triggers, Apex provides trigger support for managing records. Use triggers to perform tasks that can't be done by using the point-and-click tools in the Salesforce user interface. For example, if validating a field value or updating a field on a record, use validation rules and workflow rules instead.

Salesforce Interview Questions on Triggers - Salesforce Blog

A trigger is an Apex script which executes before or after DML events occur. Apex triggers enable you to work on custom steps of after and before logics to data in Salesforce. It works insertions, updates, or deletions. As database systems support triggers, Apex also allows triggers to support managing records.
