Note that this result is the same as for the strong acid-strong base titration example provided, since the amount of the strong base added moves the solution past the equivalence point.

14.7 Acid-Base Titrations - Chemistry

An acid-base titration is a quantitative analysis of acids and bases; through this process, an acid or base of known concentration neutralizes an acid or base of unknown concentration. The titration progress can be monitored by visual indicators, pH electrodes, or both. The reaction’s equivalence point is the point at which the titrant has exactly neutralized the acid or base in the unknown analyte; if you know the volume and concentration of the titrant at the equivalence point, you can ...

Acid-Base Titrations | Introduction to Chemistry

Here, we will consider titrations that involve acid-base reactions. In a titration, one reagent has a known concentration or amount, while the other reagent has an unknown concentration or amount. Typically, the known reagent (the titrant) is added to the unknown quantity and is dissolved in solution.

Chapter 15 Acid Base Titration Ph Practice Test

Acid is titrated with a base, and a base (alkali) is titrated with an acid. The use of an indicator decides the endpoint in Titration. Acid-base titrations are in use to calculate the amount of a known acidic or basic substance through acid-base reactions. The word Titration comes from the Latin word titulus, which means an inscription or a title.
