The nervous system is the part of the body that coordinates voluntary and involuntary actions and transmits signals to and from different parts of its body. It detects and responds to changes inside and outside the body. Along with the endocrine system, the nervous system controls the vital functions of the body and maintains homeostasis.

Nervous System -

Anatomy & Physiology

The nervous system can be separated into divisions on the basis of anatomy and physiology. The anatomical divisions are the central and peripheral nervous systems. The CNS is the brain and spinal cord. The PNS is everything else.

12.1 Basic Structure and Function of the Nervous System ...

In the brain, CSF is produced by special capillaries called the choroid plexus and flows through the nervous tissue of the CNS. Specifically, CSF circulates to remove metabolic wastes from the interstitial fluids of nervous tissues and return them to the blood stream. The ventricles are the open

spaces within the brain where CSF circulates. The CSF circulates through all of the ventricles to eventually emerge into the subarachnoid space where it will be reabsorbed into the blood.

Anatomy and Physiology of Central Nervous System Tutorial

The nervous system, along with the endocrine system, controls and integrates the activities of all the body's organs and tissues. It receives and processes sensory input from organs such

as the eyes, ears and skin, and responds through a variety of effector organs.

Anatomy and physiology of ageing 5: the nervous system ...

The nervous system is comprised of two major parts, or subdivisions, the central nervous system (CNS) and the peripheral nervous system (PNS). The CNS includes the brain and spinal cord. The brain is the body's "control center". The CNS has various centers located within it that carry out the sensory, motor and integration of data.

Human Physiology/The Nervous System

Having looked at the components of nervous tissue, and the basic anatomy of the

nervous system, next comes an understanding of how nervous tissue is capable of communicating within the nervous system. Before getting to the nuts and bolts of how this works, an illustration of how the components come together will be helpful.

The Function of Nervous Tissue - Anatomy and Physiology

The enteric nervous system (ENS) is a quasi autonomous part of the nervous system and includes a number of neural circuits that control motor functions, local blood flow, mucosal transport and secretions, and modulates immune and endocrine functions.

Basic Structure and Function of the Nervous System ...

Nervous tissue is composed of two types of cells, neurons and glial cells. Neurons are the primary type of cell that most anyone associates with the nervous system. They are responsible for the computation and communication that the nervous system provides. They are electrically active and release chemical signals to target cells.
