Special Functions And The Theory

Special functions are particular mathematical functions that have more or less established names and notations due to their importance in mathematical analysis, functional analysis, geometry, physics, or other applications. The term is defined by consensus, and thus lacks a general formal definition, but the List of mathematical functions contains functions that are commonly accepted as special.

Special Functions and the Theory of Group Representations ...

A standard scheme for a relation between special functions and group representation theory is the following: certain classes of special functions are interpreted as matrix elements of irreducible representations of a certain Lie group, and then properties of special functions are related to (and derived from) simple well-known facts of representation theory.

Special Functions and the Theory of Group Representations

The Gamma function $\Gamma(x)$ was discovered by Euler in the late 1720s in an attempt to find an analytical continuation of the factorial function. This function is a cornerstone of the theory of special functions. PG course on SPECIAL FUNCTIONS AND THEIR SYMMETRIES4 Thus $\Gamma(x)$ is a meromorphic function equal to $(x;1)!$ when x is a positive integer.

The Lie theory approach to special functions

The subjects treated in this book have been especially chosen to represent a bridge connecting the content of a first course on the elementary theory of analytic functions with a rigorous treatment of some of the most important special functions: the Euler gamma function, the Gauss hypergeometric function, and the Kummer confluent hypergeometric function. Such special functions are indispensable tools in "higher calculus" and are frequently encountered in almost all branches of pure and ...
