In 2006 , Murty proposed an interior point method for solving LP [1,2]. Each iteration in Murty's method consists of two steps ; a centering step and a descent step. The centering step is a corrector step [3] that tries to move a current interior feasible solution into the center of the feasible region without sacrificing the objective quality.

LINEAR - University of Michigan

The theory behind linear programming drastically reduces the number of possible solutions that must be checked. The linear programming problem was first shown to be solvable in polynomial time by Leonid Khachiyan in 1979, [5] but a larger theoretical and practical breakthrough in the field came in 1984 when Narendra Karmarkar introduced a new interior-point method for solving linear-programming problems.
