Algebraic Models For Accounting Systems

Abstract Algebra is articulate in the description of a formal system, based on a set of axioms and proved theorems. Here, the accounting system is defined as a formal system with 10 axioms. It applies the following abstract algebra concepts: 1) Balance Vector: a single column vector of accounting elements, with total sum zero (balanced account).

Algebraic Models For Accounting Systems

This book derives a basis for algebraic models to represent double entry accounting systems. The comprehensive, proof-based development motivates with clear, lucid explanation of basic accounting operations and generally from very elementary mathematical concepts. Undergraduates with a basic grasp of matrices, group theory, set theory, linear algebra and the rudiments of accounting can follow the reasoning easily.

The paper describes an algebraic structure which embodies the essential features of the double-entry accounting system. The structure has the benefits of providing reliable means to record the balances of the accounts of the system and to apply transactions to the accounts. It will detect transactions which are of an undesirable type or which lead to inadmissible balances, thus preserving the ...

The basic model says that assets equal liabilities plus owner's equity. In other words, the total assets of a firm equal the total of its liabilities and owner's equity. Furthermore, revenue increases the owner's equity and expenses decrease the owner's equity.

The Accounting Model of Double-Entry Accounting - dummies

The fundamental algebraic equation in accounting is "assets = liability + capital." Capital is commonly called equity. If the only thing you own is a car, and you are making car payments, you can use this formula to depict this particular financial situation as the car's market value = the amount you owe + equity, or

$\$15,000 = \$10,000 + \$5,000.$
