System modeling and signal processing for a switch antenna array radar

Abstract: A system composed of a single transmitter, M receiving antennas, and a single receiving channel is studied. Echo radar signals are acquired in a number of the cycles and used for estimation of the angle, velocity, and range in a multiple moving target scenario.

Process modeling is a technique designed to understand and describe the process. It connects and improves the communication between the current and the future state of a process. For example, a diagram that represents how to deliver a product – from the client's order, the entry, communication with shipping, inventory or making to the delivering is a mapping of a process.

Mathematical Modeling of Production Systems

There are some steps to follow when modeling a process, like the following ones: Identify the process and produce an 'as is' model – how is the process now. Check out this free tool for process modeling! Review, analyze and update the 'as is' process model – based on your knowledge, the people involved and simulations. Design the 'to be' model – how the process should work.

Business process modeling: examples and pictures

Modeling processes is a critical component for effective business process management. Process modeling software gives an analytical representation of 'as-is' processes in an

organization and contrasts it with 'to-be' processes for making them more efficient. Many business process modeling tools end up producing something like this:
