Calculate the heat flux through the insulated sheet. Here, is the temperature difference, is the length of the insulated sheet along the direction of heat flow,

and k is the thermal conductivity.
Substitute for, 0.02 m for L , and for k .
Therefore, the heat flux through the insulation sheet is.

Heat travels from one place to the other in 3 ways. We describe this thoroughly in all our heat transfer homework help services. These methods are –
Conduction: When two or more objects are in direct contact, the heat transfer is done in a certain way. This is called conduction. Convection: It is a characteristic of heat that warmer objects rise above the cooler objects and the cooler objects take the place of the warmer objects.
