Thermal Energy and Heat While thermal energy refers to the total energy of all the molecules within the object, heat is the amount of energy flowing from one body to another spontaneously due to their temperature difference. Heat is a form of energy, but it is energy in transit. Heat is not a property of a system.

### What is Thermal Energy and Heat - Definition

Describe how thermal energy transfer may take place by conduction, convection and radiation.

Conduction is the main method of thermal energy transfer in solids. When a material is heated, the atoms start to move around (vibrate) more. As they do so they bump into each other, transferring energy from atom to atom.
