However, highly accurate data for thermodynamic properties at liquid

states of the relevant systems are rare. While most properties can be determined at liquid states with higher accuracy than at gaseous or supercritical states for pure fluids, it is difficult to determine the exact composition of the liquid in the measuring cell for the mixtures considered here.

Thermodynamic properties.

Thermodynamic properties are the characteristics (identifiable and observable) of a system by which it can be specified. For example: mass, volume, temperature, pressure etc. Thermodynamic properties can be divided into two groups. Extensive properties. Intensive properties.
