Access Rules Cisco

An access rule permits or denies traffic based on the protocol, a source and destination IP address or network, and optionally the source and destination ports. For transparent mode only, an EtherType rule controls network access for non-IP traffic. An EtherType rule permits or denies traffic based on the EtherType.

Configuring Access Rules - Cisco

Create an Access Rule. Step 1. Log in the web-based utility of the router and choose Firewall > Access Rules. Step 2. In the IPv4 or IPv6 Access Rules table, click Add to create a new rule. Note: On the RV34x Series Router, it is possible to configure up to 202 rules. In this example, IPv4 is used. Step 3.

Configure Access Rules on an RV34x Series Router - Cisco

Access rules determine which traffic is allowed through the ASA. There are several different layers of rules that work together to implement your access control policy: Extended access rules (Layer 3+ traffic) assigned to interfaces—You can apply separate rule sets (ACLs) in the inbound and outbound directions.

CLI Book 2: Cisco ASA Series Firewall CLI Configuration ...

Access rules define the rules that traffic must meet to pass through an interface. When you define rules for incoming traffic, they are applied to the traffic before any other policies are applied (with the exception of less common AAA rules). In that sense, they are your first line of defense.
