Computer Architecture ABSTRACT VLIW architectures are distinct from traditional RISC and CISC architectures implemented in current mass-market microprocessors. It is

important to distinguish instruction-set architecture—the processor programming model—from implementation—the physical chip and its characteristics. VLIW microprocessors and superscalar implementations of traditional

An Introduction To Very-Long Instruction Word (VLIW ...

VLIW Architecture. Very-Long Instruction Word (VLIW) architectures are a suitable alternative for exploiting instruction-level parallelism (ILP) in programs, that is, for executing more than one basic (primitive) instruction at a time. These processors contain multiple functional units, fetch

from the instruction cache a Very-Long Instruction Word containing several primitive instructions, and dispatch the entire VLIW for parallel execution.

VLIW Architecture - IBM

Introduction o Very long instruction word or VLIW refers to a processor architecture designed to take advantage of instruction level parallelism o Instruction of a VLIW processor consists of multiple independent operations grouped together. o There are Multiple Independent Functional Units in VLIW processor architecture. o Each operation in the instruction is aligned to a functional unit. o All functional units share

the use of a common large register file. o This type of processor ...

In computer architecture, a transport triggered architecture (TTA) is a

kind of processor design in which programs directly control the internal transport buses of a processor.

Computation happens as a side effect of data transports: writing data into a triggering port of a functional unit triggers the functional unit to start a computation. This is similar to what happens in a systolic array.

Advantages of Superscalar Architecture : In a Superscalar Processor, the detrimental effect on performance of various hazards becomes even more pronounced. The compiler can avoid many hazards through

judicious selection and ordering of instructions.

instruction word (VLIW)
describes a computer
processing architecture
in which a language
compiler or pre-
processor breaks
program instruction
down into basic
operations that can be
performed by the
processor in parallel
(that is, at the same
time). These
operations are put into
