Research Correlation Of The Health

Correlation and causation. Science is often about measuring relationships between two or more factors. For example, scientists might want to know whether drinking large volumes of cola leads to tooth decay, or they might want to find out whether jumping on a trampoline causes joint problems. Correlation is when two factors (or variables) are related, but one does not necessarily cause the other.

Understanding Health Research • Correlation and causation

Although correlational research can't prove causation, with a large amount of carefully collected and analyzed data, it can strongly support a causal hypothesis. In the examples above, the health effects of passive smoking and the greenhouse effect have been supported by so much robust correlational evidence that a causal relationship is accepted by scientists.
