...

Here, we will solve systems with 2 variables, given in 2 linear equations. Idea here is to express one variable using the other variable in one equation, and use it in the second equation, where we would get a linear equation with one variable. Let's the how it works in one simple example: $x - y = 3$. $2x + y = 9$. $y = x - 3$. $2x + x - 3 = 9$. $3x = 9 + 3$. From the first equation, we express y using x. In the second equation, we write $x - 3$ instead of y.

Algebra 2 - MRS. REED'S MATH CLASS

Two step math equations are algebraic problems that require you to make two moves to find the value of the unknown variable. For example, using the equation $3x + 5 = 11$ we will need to perform two steps to find the value of x . The first step would be to get the constant values of the equation by themselves. In this case 5 and 11 are our constants.
