Towards the First Silicon Laser: Proceedings of the NATO ...

Despite many claims that silicon technology has reached fundamental limits, the performance of silicon microelectronics continues to improve steadily. The same holds for almost all the applications for which Si was considered to be unsuitable. The main exception to this positive trend is the silicon laser, which has not been demonstrated to date.

Apparently researchers
at the University of
California, Los Angeles,
grasped the same idea,
and reported their
development of the
first silicon laser last
October. However,
their device required
that a silicon chip be
inserted in an 8-meter
ring of optical fiber,
whereas the Intel
group made its laser all
in silicon.

Intel Makes a Silicon

Laser

Creation of first practical silicon-based laser has the potential to transform communications, healthcare and energy systems. A group of researchers from the UK, including academics from Cardiff University, has demonstrated the first

practical laser that has been grown directly on a silicon substrate. It is believed the breakthrough could lead to ultra-fast communication between computer chips and electronic systems and therefore transform a wide variety of sectors, from communications and ...
