 The degree of indeterminacy i_e for internal indeterminacy

is given by the following equation: $(4) i_e = 3m + r - (3j + e_c)$ As it was for external determinacy, if this equation results in $i_e = 0$, the structure is determinate; if it results in $i_e < 0$, then the structure is unstable.

Force Method for Analysis of Indeterminate Structures

An indeterminate structure is one whose unknown forces cannot be determined by the conditions of static equilibrium alone and will require, in addition, a consideration of the compatibility conditions of different parts of the structure for its complete analysis. Furthermore, structures must be stable to be able to serve their desirable functions.

Approximate Analysis of Indeterminate Structures ...

Description. This second volume on structural analysis describes analysis methods for statically indeterminate structures. It is intended for students of civil and mechanic domains seeking to acquire and improve their knowledge of these methods. This book covers various methods of analysis, including the method of three moments, the method of forces, the slope-deflection method, the moment-distribution method,

influence lines and the analysis of statically indeterminate arches.
