Box-Jenkins Forecasting | The Forecast Pro

In 1970 George Box and Gwilym Jenkins popularized ARIMA (Autoregressive Integrated Moving Average) models in their seminal textbook, Time Series Analysis: Forecasting and Control 1. Technically, the forecasting technique described in the text is an ARIMA model, however many forecasters (including the author) use the phrases "ARIMA models" and "Box-Jenkins models" interchangeably.

Forecasts Using Box Jenkins Models For The Ambient Air

Box Jenkins (B-J) Model Definition. The Box-Jenkins Model is a mathematical model used for forecasting of data following specified time series. This model reflects predictable cycles, trends and patterns of time series data. The Box-Jenkins Model analyses and accurately forecasts diverse time series data for a specified time, usually short-termed. The outcomes or results of the analysis of the Box-Jenkins model are dependent on the divergences between data points or the time series data.
