An Introduction To Survival Analysis

Survival analysis is the name for a collection of statistical techniques used to describe and quantify time to event data. In survival analysis we use the term 'failure' to dene the occurrence of the event of interest (even though the event may actually be a 'success' such as recovery from therapy).

An Introduction to Survival Analysis - Biecek

Introduction. In survival analysis the main interest focuses on the time taken for some dichotomous event to occur. Although the term survival is used, the event of interest is not limited to death or failure. It can be any dichotomous event, such as nonfatal MI, adverse events, computer crashes, or bursting of a balloon filling with air; essentially it can be any definable event.

An Introduction to Survival Analysis - ScienceDirect

Introduction. Survival analysis is one of the primary statistical methods for analyzing data on time to an event such as death, heart attack, device failure, etc. Such data analysis is essential for many facets of legal proceedings including apportioning cost of future medical care, estimating years of life lost, evaluating product reliability, assessing drug safety, measuring viability of medical therapies and devices, assessing actuarial loss, etc.
