The shape of the universe, in physical cosmology, is the local and global geometry of the universe. The local features of the geometry of the universe are primarily described by its curvature, whereas the topology of the universe describes general global properties of its shape as of a continuous object. The spatial curvature is related to

general relativity, which describes how spacetime is curved and bent by mass and energy, while the spatial topology cannot be determined from its curvature; I

The Universe: From Flat Earth to Quasar by Isaac Asimov

Just as we experience the spherical Earth as flat, the shape of the universe is not necessarily as we first

experience it. The idea that the fabric of the universe might curve in various directions dates back to Albert Einstein's General Theory of Relativity, which was published in 1915. The Earth's two-dimensional plane curves into a third dimension to form a sphere.
