Olfaction represents an ideal model system for the study of mammalian habituation given that it is an anatomically relatively simple system with strong reciprocal connections to the limbic system, driving both reflexive and non-reflexive (motivated) behaviors that are easily quantifiable.

OLFACTION AS A MODEL SYSTEM FOR THE NEUROBIOLOGY OF ...

Many types of computational models exist, and based on their primary purpose, models of the insect olfactory system may be divided into three categories: (a) feature-replication models, which try to reproduce an experimentally observed result to help understand the underlying mechanisms; (b) feature-prediction models, which extrapolate from what has been observed to predict unexplored aspects of neural circuits that can be tested later by experiments; and (c) role-detection models, which ...

Updated December 03, 2019 The olfactory system is responsible for our sense of smell. This sense, also known as olfaction, is one of our five main senses and involves the detection and identification of molecules in the air. Once detected by sensory organs, nerve signals are sent to the brain where the signals are processed.

The sense of olfaction is complex. Odor perception is influenced by many factors unique to each individual as well as external environmental factors. The basis of odor perception is the contact between chemical molecules, mainly in the gaseous state, which can be detected by the olfactory epithelium.
